Projects

Furniture Store — *A full stack Application **Next.Js Golang Fiber Mongo***

This project is a full-stack web application focused on the complex manipulation and display of datasets. A core feature of the app is the ability to isolate a single data item and dynamically transfer its information across different pages, This was achieved using [Zustand](#) for state management and local storage to persist data, ensuring a seamless user experience when navigating the site.

Santino Portfolio— *Frontend web Application*

This project is an expression of my work as both a graphic designer and software engineer. Built with a simple and clean navigation structure, the main focus was on implementing SEO best practices and generating a sitemap. Using Next.js provided a solid foundation for performance, accessibility, and search engine optimization. The rest of the site highlights my Tailwind expertise, showcasing modern web design principles and responsive layout techniques.
